PROFESSIONAL SUMMARY

Final-year B.Tech Engineering student with a keen interest in data and its industry applications. Working on solving business problems by combining technology with a consulting approach, turning data-driven solutions into clear visualisations and dashboards that help teams make better decisions. Has gained practical experience through internships at Deloitte Touche Toshmato LLP and Predixion AI (Fin-tech Startup).

EDUCATION

Vellore Institute of Technology **CGPA: 8.42/10**
B.Tech., Computer Science and Engineering *2023 – 2027*

EXPERIENCE

Predixion AI
Analyst Intern *September 2026 – Present*

- **LeadX : AI Agent Sales Platform:** Worked on LeadX, Predixion AI's platform for creating, managing and monitoring AI voice agents that run sales calling campaigns; built the web app's dashboard for campaign analysis and interested-lead tracking.
- **BNPL Client Analytics:** Carried out a full-year analysis of AI calling data for a Buy-Now-Pay-Later client, cleaning data with python using pandas and numpy library and creating a reproducible script and writing SQL queries on Supabase (PostgreSQL), validate and summarise call data; built dashboards and reports showing leadership which segments and time periods drove conversions.
- **Campaign Operations:** Set up and ran AI lead-agent calling campaigns on LeadX for multiple clients and partners, covering lead upload, agent setup across voice providers (Voiz, ElevenLabs, Sarvam AI), live monitoring and progress reports for clients.

Deloitte Touche Tohmatsu India LLP **Gurugram, India**
Intern, Strategy, Risk & Transactions *May 2026 – August 2026*

- **Bid Compliance Analytics:** Designed a Power BI bid compliance dashboard for an NHAI tender using a star-schema data model and custom DAX measures, scoring 19 bidders against a 32-point checklist and replacing manual document-by-document review.
- **Feasibility Study:** Contributed to the feasibility study for a 10 MW Tier III data centre under a PPP model, analysing demand, site and infrastructure needs and a 20-year operating case, helping the client judge project viability.
- **Asset Monetisation:** Built the reporting layer for the Asset Registration System by consolidating scattered highway asset records into clean, review-ready dashboards, enabling stakeholders to review and sign off on asset data from one place.

PROJECTS

TeleTrace – Call Centre ETL Pipeline | *Python, SQLite, SQL* GitHub

- **Problem:** Task was to check the raw tele-calling data contained missing fields (∼15%), duplicates (∼5%) and invalid timestamps (∼3%), that makes it unreliable. job was to clean it and set up a proper pipeline.
- **Action:** Built a 5-stage ETL pipeline in Python that validates fields, types and timestamps (logging a reason for every rejected record), cleans and enriches data (IST timestamps, call duration, hour, weekend flag, duration buckets), and loads it into an idempotent SQLite database queried with SQL for 5 business questions exported as CSV reports.
- **Result:** Turned 500 raw records into 400 analysis-ready rows; found Marathi calls had the highest connect rate (∼31.6%) and 3 PM the highest callback rate (50%), with fully reproducible results via a fixed random seed.

TenderIQ – Bid Compliance System | *Power Automate, Power BI, Excel* GitHub

- **Problem:** Manually checking every bid against a tender's RFP rules was slow and gaps were easy to miss, it was a long and complicated process requiring too much human workforce time.
- **Action:** Collected the RFP and Bid data and built a Microsoft Power Automate flow with Open AI API that checked 19 bids against 14 RFP requirements each (266 checks), each marked Compliant, Partial, Non-Compliant or Not Applicable, and built a 6-page Power BI dashboard with 20+ KPI cards and drill-down views.
- **Result:** Gave each bid a compliance score, flagged 11 non-compliant and 34 partially compliant items, and confirmed 9 of 19 bids as fully compliant; results matched the expected outcome in all 19 test runs (100%).

SKILLS

Languages & Querying: SQL, Python, Java
Data Analysis: Pandas, NumPy, Matplotlib, Streamlit, Ploty, Jupyter Notebook
BI & Visualisation: Power BI (DAX, Data Modelling, Star Schema), Excel, Oracle Analytics Cloud
Data Platforms & Tools: Supabase, Power Automate, Git, GitHub
Methods: Data Cleaning & Validation, ETL, Exploratory Data Analysis, KPI Reporting, Dashboarding, Requirement Gathering

LEADERSHIP & CERTIFICATIONS

- **Co-Lead, Vitronix (Technical Club):** Scripted technical workshops and speaker sessions for a 300+ member community, coordinating design, outreach and logistics teams to support 110+ registrations.
- **Co-Lead, Mahro Rajasthan Club (Cultural Club):** Led a 7-member team across 4 events for 500+ students; standardised a bilingual script template and two-round review process.
